

## pH and Cancer: Acidic pH Levels Can Lead To Cancer...

### Normalizing pH Levels Can Stop Cancer In Its Tracks

There is plenty of research showing the link between acidic **pH and cancer**. Cancer thrives in an **acidic environment**, and doesn't survive in a normal, more alkaline environment. Cancer cells make your body even more acidic as they produce lactic acid. So if you have cancer, your pH levels are low and your body is too acidic.

Taking action to make your body more alkaline is vital in the battle against cancer.

Unfortunately...

The majority of the foods and drinks we consume are acidic, such as meat, grains and sugar, with colas and other soft drinks being highly acidic. So unless you have been eating a very healthy diet, full of fresh fruit and vegetables, your body is way too acidic. Creating a very good environment for cancer to grow in.

Actually, too much acidity is an underlying factor in many degenerative diseases -- diabetes, arthritis, fibromyalgia and more. A basic maxim of natural physicians is: Balance the bio-terrain. Do this first, then everything can come back to normal.

Taking medicines or supplements for cancer while your pH is highly acidic is a bit like washing dishes in a sink of dirty water, even when you put in plenty of soap, you can't get the dishes clean.

According to Keiichi Morishita in his book, *Hidden Truth of Cancer*, when your blood starts to become acidic, your body deposits acidic substances (usually toxins) into cells to allow the blood to remain slightly alkaline. This causes your cells to become more acidic and toxic, which results in a decrease of their oxygen levels, and harms their DNA and respiratory enzymes.

Over time, he theorizes, these cells increase in acidity and some die. These dead cells themselves turn into acids. However, *some* of these acidified cells may adapt in that environment. In other words, instead of dying - as normal cells do in an acid environment - some cells survive by becoming abnormal cells.

**pH and Cancer** -- Balanced pH levels in Healthy Cells

These abnormal cells are called malignant cells. Malignant cells do not correspond with brain function nor with our own DNA memory code. Therefore, malignant cells grow indefinitely and without order. **This is cancer.**

As you can see, he is describing, from a different point of view, the link between pH and cancer, a process by which low oxygen levels turn some cells cancerous. Alkaline water (including the water in cells) holds a lot of oxygen. Acidic water holds very little oxygen. So the **more acidic** your cells are, the less oxygenated they will be. To make matters worse, the fermentation process cancer cells use to produce energy creates lactic acid, further increasing acidity and reducing oxygen levels.

Sang Whang, in his book *Reverse Aging*, points out that toxins are **acidic**. If your blood is too acidic, toxins will not be released from your cells into the blood. So your cells can't be detoxified. This buildup of toxins in your cells results in acidic, poorly oxygenated cells, which can turn cancerous. He explains,

"In general, degenerative diseases are the result of acid waste buildups within us. When we are born, we have the highest alkaline mineral concentration and also the highest body pH. From that point on, the normal process of life is to gradually acidify. That is why these degenerative diseases do not occur when you are young. **Reverse aging requires two separate steps: chemical and physical.** The first step is to lower the acidity of the body so that it can dispose of acidic wastes in the blood and cellular fluids safely and easily. The second step is to physically pull out old stored wastes into the blood stream so that they can be discharged from the body."

As you learn about pH and cancer, you find there is a long history of reversing cancer simply by alkalinizing the body. It is one of the basic strategies in the battle against cancer and for improving your health in general.

Virtually *everyone* with cancer has low pH levels. This is because cancer is created, and thrives, in a body that has low pH levels, a body that is acidic. Low pH causes your body to store more toxins in cells, and reduces oxygen levels, both of which are fundamental to the development of cancer. When cancer cells grow, they produce even more acid. Making it very difficult to raise pH levels, especially when cancer is present.

When you take something to increase pH levels, your cells notice the difference and start to dump some of the toxins they are holding back into the bloodstream now that they have a chance to get rid of them. (Toxins are acidic and the cells won't release them if the blood is too acidic. The blood must be kept in a narrow range around neutral pH.) Because the cells are releasing some of their stored toxins, your pH levels drop again. This detoxification process can take months to complete. In addition, because cancer cells pump out lactic acid as a byproduct of how they produce energy, they create even more acidity. You need to work a long time at normalizing pH because of these factors but as you do, you will make your body, in a sense, cancer proof.

Now that you know about the link between pH and cancer, you can do something about it. Because of the basic fact of cancer thriving in acidic conditions, there are many sites and books or ebooks promoting various ways to beat cancer by alkalizing the body with their particular product suggestions.

Coral calcium and alkaline water machines are a couple that have been popular. Combination of oxygen catalyst drops and a high quality green drink like "Go Green".

So it can get a bit confusing as to what the best thing to do would be.

For a while, as some of the more important cancer fighting suggestions like Zeolite Enhanced with DHQ did work to increase pH levels, our primary suggestion was to drink 3 teaspoons of baking soda in water every day. Its virtue being that it is inexpensive to do so why not do it. But as pH is so fundamental to fighting cancer, we did some energetic testing to get some idea as to which ways to increase pH levels in your body were best for fighting cancer. The results were pretty interesting.

**Alkaline drops**, where you put a couple in everything you drink, tested at a low **35**. Not very good, perhaps because they are not that healthy a thing to be doing. Getting a machine that makes alkaline water, and drinking the water tested at **135**. A machine that vortex's water, oxygenates it and adds minerals to increase pH is a bit better at **195**. They are certainly fine to do, but not what you'd call really good. The 3 teaspoons of **baking soda** in water every day was a **142**. Taking **Coral Calcium** was better, a **235** for fighting cancer. A high quality **green drink** marketed for alkalizing the body came in at a **214**. For adjusting pH only, **Zeolite Enhanced with DHQ** is a **235** when used in the quantities suggested for cancer.

**OxyDHQ** tests energetically, for its pH adjusting ability, at **345**, virtually tied with the **Oxygen Catalyst** used for adjusting pH, which comes in at **346**. (OxyDHQ tests much higher for fighting cancer, **1350**, because the oxygen it creates also does an especially good job of killing cancer cells. Overall for fighting cancer, the Oxygen Catalyst comes in at **200**, it doesn't do as good a job at fighting cancer as it adjusting pH levels.)

**OCMP** is a proprietary formula of minerals with some other nutrients, that is so effective at alkalizing cells, it is a very strong cancer killer. Better still, it works to correct the main underlying cause of cancer, the buildup of toxins in cells which prevents nutrients like oxygen to enter cells. OCMP works by adjusting the ionic charge gradients inside and outside the cell wall, allowing toxins to be better eliminated, and for nutrients to be better absorbed. This makes it one of the best preventive/maintenance products to use. It's healing power for fighting cancer is **1280** when using 1 to 3 bottles a month.

A frequency enhanced elixir, **Custom Elixir pH**, is second most effective pH supplement we have tested. When using 2 or 3 bottles a month, Custom Elixir pH energetically tests at **820** for adjusting pH and fighting cancer. The strongest

combination is to use both **OCMP and Custom Elixir pH**. Together they have a synergistic effect and come in at **2920** for fighting cancer.

The next best pH adjuster we have found is an herbal formula originally designed to reduce inflammation and support the heart and lungs. But when the developer of this product checked to see how well it adjusted pH levels, he discovered it did a remarkably good job of increasing pH levels in the body. So good, in fact, he renamed the supplement **pH Balancer 8.0**.

Energetic testing validated his conclusions. pH Balancer 8.0 comes in at **499** when taken in the suggested quantities. It has the ability to potentize - making other products more effective. Most particularly, **OxyDHQ and Zeolite Enhanced with DHQ**. When using these three supplements in the appropriate quantities for the amount of cancer you have, energetic testing puts their healing power at **3340** for fighting cancer.

**BLA** is the best cancer fighter that adjusts pH. It works in a unique way that increases pH in your body if you have cancer.

BLA is an elixir supplying a set of instruction to the body in the form of vibrational frequencies your body can understand. It instructs your body to stop cancer cells from pumping the lactic acid they produce (as part of the fermentation process) into the body.

And cancer cells produce a lot of lactic acid as glucose fermentation is their primary source of energy.

This lactic acid, when it is pumped out, makes your body even more acidic than it already is. Using BLA will stop this lactic acid from being pumped out so it works to prevent this lactic acid from making you more acidic. Thus, BLA helps to alkalize your body by stopping the output of lactic acid from cancer cells.

Many times, if a significant amount of cancer is in the liver, lungs or stomach, the cancer may produce so much lactic acid in a relatively confined space that the body produces fluid to dilute the acidic buildup. Causing ascites, a build-up of fluid in these organs.

The liver also plays a role in the development of ascites in the abdominal area. When the liver is not doing its job of eliminating toxins, they build up. And can build up to such an extent that fluid is produced to dilute the toxic overload -- which is also acidic.

BLA is always fundamental to dealing with ascites, even when the liver is not involved. Use six bottles a month. Fulvitea and Immune Force are also important to use when the liver is involved in causing ascites.

### **BLA Blocks Lactic Acid Release From Cancer Cells And Raises pH Levels**

BLA is a frequency enhanced water elixir made with the unique technology used in PrugX and many other top cancer fighters. These energies deliver an information

message to your body. The instructions BLA carries to your body tell it to block the effluxion or elimination of lactic acid from all cancer cells.

What users are finding is that it takes four days for BLA to stop the lactic acid pumps in cancer cells. Lactic acid is constantly being produced by cancer cells as they primarily ferment sugars to make their energy.

Once BLA stops the lactic acid pumps, that lactic acid can no longer be moved out of the cancer cells. Once this happens, the lactic acid starts to build up in the cancer cell.

Cancer cells produce a lot of lactic acid as it is a byproduct of the sugar fermentation they primarily use to make energy. As this lactic acid produced by the cancer cell accumulates in the cancer cells, thanks to BLA, it makes the cancer cells too acidic. Over time, the lactic acid builds up to such a level that the cancer cells becomes too acidic and they die a natural death.

This process is the opposite of trying to kill cancer cells by increasing pH levels.

It is much more effective because it uses what the cancer cells produce, lactic acid, to kill the cells, as opposed to trying to make cancer cell pH more alkaline, with alkaline minerals, alkaline water and so on.

The process of alkalizing cancer cells is slower and less effective than making them too acidic, because cancer cells naturally neutralize pH buildup with their lactic acid production. All cells, including cancer cells, die if they either get too alkaline or too acidic.

So to explain again, cancer cells produce energy almost entirely by fermentation, breaking down sugars, as opposed to aerobically producing energy with oxygen. This fermentation process produces lactic acid as a byproduct. When you stop the elimination of lactic acid with BLA, lactic acid builds up in the cancer cell. At some point the lactic acid builds up to an amount that the cancer cells become so acidic they can no longer function, and die a natural death.

**The buildup of lactic acid works amazingly well for causing cancer cells to die a natural death -- fast.**

One researcher, Dr. Rosenberg, MD, a leading cancer doctor, using a different process to block the lactic acid pumps in cancer cells, fed a patient a huge amount of sugar by giving him glucose IVs -- once the lactic acid pumps were blocked.

Feeding cancer cells sugar caused them to produce much more lactic acid than they normally would. In fact, the more sugar he gave his patient, the faster the cancer cells died because the lactic acid built up faster in the cells.

He brought the tumor markers in one advanced cancer patient down to 0 in 30 days. A second patient's markers dropped 40% in 2 weeks. Truly amazing results.

In use since early 2011, BLA is proving to be one of the top cancer fighting supplements we have researched. Especially when used with PrugX, a sister elixir that causes a build up of hydrogen peroxide in cancer cells. They work synergistically together, creating a toxic soup of lactic acid and hydrogen peroxide in cancer cells.

You can read more about PrugX and the new PrugX Enhancer in the Antioxidants and Cancer section of this site.

The hydrogen peroxide buildup causes free radical damage to cancer cells. PrugX was developed to tell the body to stop the release of hydrogen peroxide by cancer cells after researchers discovered that cancer cells were continually producing hydrogen peroxide and releasing it to damage nearby healthy cells.

When using BLA you can more rapidly increase the build-up of lactic acid in the cancer cells by doing what Dr. Rosenberg did, increase consumption of sugars so that the cancer cells eat more and thus make more lactic acid. Any sugar will work, but as refined sugars tend to wipe out the immune system response, natural sugars are better. Early on the recommendation with BLA was to do just this.

However, with the addition of PrugX, PrugX Enhancer, BLA Enhancer and Glutam, additional sugar is not needed or even wanted.

The combination causes cancer cells to die quickly without consuming extra sugar. And feeding cancer cells sugar will increase their energy. This combination is now focused on shutting down the energy production of cancer cells so that they are starving for energy along with suffering an overload of lactic acid and hydrogen peroxide.

Even from the first, without PrugX, BLA was producing impressive results.

**Dean Edmonds reported that his PSA had been rising every month, from 940.6 in February of 2011 to 3778.7 on May 11, 2011. This was when he stated using BLA, a couple of other supplements, and honey. On June 7, 2011, less than a month later, his PSA test came in at 77.**

Another user writes:

"You will know that I started taking [BLA, Custom Elixir pH and Zeolite Enhanced with DHQ] some 7 weeks ago. My local doctor is fully aware of what I am doing and is being very supportive. I had my blood tested at that time ( 7 weeks ago). At that time all my liver functions were normal apart from the tumor marker which showed a level of over 11.000 (eleven thousand) My blood was re-checked last week and yesterday my doctor advised me of the results. The tumor marker had reduced dramatically to 1400 ( fourteen hundred ) back down to the level when the cancer was diagnosed some 12

months ago....

"You should be aware that I have undertaken three separate chemo treatments already none of which showed any improvement in the tumor marker, as I said above it actually increased!

"I should probably add that my doctor was totally astounded by the results!!"  
Len S.

If you are not using BLA, it is best to avoid consuming carbohydrates like sugar that feed the cancer. But when you are using BLA, once the lactic acid pumps have been shut down, the additional lactic acid that is produced by the cancer cells when you feed them sugar stays in the cancer cells. The faster you increase levels of lactic acid, by feeding them sugars, the faster the cancer cells die a natural death.

### **BLA raises overall body pH levels too.**

When the cancer cells have stopped pumping out the lactic acid they produce, your pH levels naturally will start to increase. One Naturopath tested BLA on 10 of her patients with advanced cancer. At the end of two months everyone had increased their overall pH levels significantly, most by at least .75, some by a full point some by half a point.

In addition, the CA markers all went down, most by around 20%, one was 10% and another by 25%. All these are significant scores, and they were caused by BLA alone.

### **Two Elixirs Prevent Cancer Cells From Neutralizing The Lactic Acid Buildup Caused By BLA**

#### **1. BLA Enhancer -- Reduces The Ability of Minerals To Neutralize Lactic Acid Buildup**

This sister elixir to BLA reduces the ability of cancer cells to neutralize the buildup of lactic acid in them. The major minerals, calcium, magnesium, sodium and potassium would do just this if taken in high quantities. (The amount in ESME is a problem.) While cancer cells contain low amounts of calcium, magnesium and potassium, they contain a great deal of sodium along with the extra water that sodium attracts.

BLA Enhancer is also a frequency enhanced elixir. Among the instructions it carries into the body are instructions to reduce as much as possible the amount of minerals entering cancer cells. This keeps to a minimum the absorption of any acid neutralizing minerals.

Additional instructions tell the cancer cells to eliminate sodium and the extra water they contain. Potassium too, as sodium and potassium work together and we don't want extra potassium being brought into cancer cells to replace the sodium being eliminated.

The decrease in sodium and water means that less lactic acid will be neutralized -- and that it will be more concentrated as there will be less water to neutralize it. So they will die faster. Significantly faster.

The energetic testing on BLA's ability to fight cancer is **11,600**. Using both **BLA and BLA Enhancer** increases the energetic testing to **23,700**.

## **2. Glutam -- Prevents Glutamine From Neutralizing Lactic Acid Buildup In Cancer Cells**

L-Glutamine is the most abundant amino acid in the body. Your body needs it for ensuring nitrogen balance, maintaining gut integrity, and keeping your immune system strong.

Unfortunately glutamine also is avidly used by cancer cells in many ways. It is metabolized for fuel. In fact, one reason cancer can grow when you are on a no sugar, low carb diet is because it will burn glutamine in place of glucose sugar to make the energy it needs.

Glutamine also supplies nitrogen to cancer cells so that they can function correctly, and in general, promotes the growth of cancer cells. Even more importantly, it unfortunately helps cancer cells thwart efforts to destroy them.

There are three primary actions using glutamine that protect cancer cells and enable them to grow and thrive.

**First, glutamine stimulates production of glutathione in cancer cells.** Glutathione is a major antioxidant enzyme. You want to have glutathione, lots of it, in healthy cells. However glutathione protects cancer cells from free radical damage. Many types of chemotherapy and the elixir PrugX, kill cancer cells by causing free radical damage the DNA in cancer cells.

When cells have plentiful glutamine, they can make enough glutathione to prevent destruction.

**Secondly, when cancer cells have excess glutamine, they are able to exchange it for essential amino acids needed to prevent cell death when cells are badly damaged and poorly functioning.** This process of destroying damaged cells is called autophagy, and is an important component of natural cancer cell death. Glutamine, excess glutamine at any rate, prevent this.

**Third and most important, researchers have discovered that glutamine buffers or neutralizes lactic acid buildup in cancer cells.** As we have talked about in this article, cancer cells produce most of their energy through the metabolism of glucose sugars (and glutamine too). This produces excess lactic acid that would lower pH in cancer cells to such a low level that they would die.

Cancer cells deal with this in two primary ways. They pump out of the cell as much lactic acid as they can. And they metabolize glutamine. When glutamine is metabolized, ammonia is produced. Researchers have discovered that ammonia will neutralize acid buildup.

Cancer cells grown in a dish that had no glutamine as a food source could not survive low pH levels but would grow rapidly in high pH environments.

Cancer cells that had glutamine as a food source were found to consume more glutamine as pH was lowered -- and not die at the low pH levels.

When the glutaminase enzyme used to metabolize glutamine was inhibited, cancer cell survival dropped when pH was lowered -- causing the cancer cells to become more acidic.

What this means is that the cancer cells in your body depend on glutamine to survive -- especially when BLA is used.

They can pump out lactic acid to remove some of it, (until BLA stops that process). Cancer cells metabolize glutamine to make some of their energy, and the byproduct of this energy production is ammonia which will neutralize the lactic acid.

This mechanism explains why BLA hasn't caused all cancer cells to die quickly. They die, but not as quickly as they would because it takes a longer period of time to build up the lactic acid levels when glutamine is available to metabolize.

The cancer cells metabolize more glutamine to make energy which produces more ammonia which neutralizes the lactic acid buildup caused by BLA. Or at least some of the build-up -- slowing down the process of cancer cell death by acidosis.

It doesn't do any good to stop consumption of foods that supply glutamine. Researchers note that cancer cells will always get enough from the glutamine that is made by the body. So stopping the consumption of glutamine will only harm our healthy cells. For example, your body will not be able to make as many immune cells to fight cancer.

Stopping glutamine consumption would also create a serious negative nitrogen balance in the body. Nitrogen depletion is tied to Cachexia or muscle wasting that is the principle cause in about a third of all deaths from cancer.

So what can be done to deal with this issue?

**Glutam** is the solution as it targets cancer cells with instructions to stop the use of glutamine in cancer cells.

It is a frequency enhanced elixir that, like BLA, PrugX and other frequency enhanced elixirs, carries a set of instructions -- in the form of vibrational frequencies of the subtle

energies of those instructions -- into the body. The instructions turn off the metabolism of glutamine by cancer cells only. They stop production or uptake of the glutaminase enzymes needed to metabolize glutamine.

Glutam also tells the body to reduce the amount of glutamine that is absorbed by cancer cells.

As a consequence of using Glutam, cancer cells will have less glutamine in them, and less of that glutamine will be metabolized. This results in an inability to neutralize the lactic acid buildup caused by BLA and BLA Enhancer. This increased lactic acid buildup will cause faster cancer cell death. This is a natural death that does not initiate an inflammatory response by the immune system.

Glutam will also help PrugX and PrugX Enhancer work more effectively. PrugX causes a buildup of hydrogen peroxide in cancer cells. This hydrogen peroxide causes free radical damage to cancer cells. Glutam, by reducing the amount of glutamine in cancer cells, will reduce the ability of cancer cells to produce glutathione. Glutathione would neutralize the free radicals in hydrogen peroxide.

### **Glutam Doubles the Effectiveness of BLA and BLA Enhancer**

The energetic testing of the cancer fighting power of BLA and BLA Enhancer is a very strong **23,700**. Add Glutam to the mix and the healing power, the cancer fighting power, jumps **46,300**.

Even better, when you take PrugX and PrugX Enhancer along with BLA, BLA Enhancer and Glutam, their collective cancer fighting power shoots up to **121,400**. (These high numbers mean that it is very very good and much more effective than lower numbers.)

Add on the Immune Boost, our single top anti-cancer supplement, and the healing power increases to **186,600**.

Add on PrugX Immune Boost -- if you don't need to avoid swelling -- and the energetic testing rises to **197,700**. (Immune Force, BLA, BLA Enhancer, Glutam, PrugX and PrugX Enhancer are the top cancer fighting supplements to use whether you need to avoid any possible swelling of a tumor or not.)

OCMP, Baking Soda, alkaline water, MSM, and other mineral alkalizing supplements like coral calcium or cesium, interfere with the action of BLA. These work to alkalize cancer cells. This would, to some extent, neutralize the acid buildup in the cancer cells that BLA causes, and thus would protect the cancer cells from some of the acidosis BLA causes.

### **CSE - Cell Support Elixir**

CSE is a frequency enhanced water elixir that uses the same technology that BLA and PrugX use. It delivers a different set of instructions to your body, working in an entirely different way to fight cancer. CSE significantly enhances the ability of a couple of the top cancer fighters covered on this site, ESME which is written up on the Immune System section, and BLA. As such, it is one of the more important cancer fighters to use.

The fundamental set of instructions CSE has interacts with the water in the body, causing a reduction in the size of the clusters of the water. This reduction in size has several benefits for overall health and for fighting cancer. Circulation would improve slightly and fluids can travel further along tiny capillaries. Even the lymph system should flow a little better. This is all good, however it is at the cellular level that CSE shines.

CSE improves the ability of toxins to be removed from cells, as those toxins would be carried out in the smaller sized clusters of water that CSE creates. This will enable more toxins to be carried through the cell wall. As the underlying cause of most cancers is excess toxicity in cells, this action of CSE is significant for its ability to prevent the development of cancer and to fight cancer also.

Because toxins are acidic, the improved cellular detoxification action of CSE also improves cellular pH levels. This improved pH also translates into better oxygenation of cells. Both are actions that make it harder for cells to turn cancerous.

Along with improving transport of oxygen into cancer cells, the reduced size of water clusters caused by CSE increases absorption of nutrients into cells. This actions plays a small by significant part in preventing and fighting cancer.

Your cells are more than just a nucleus, mitochondria, enzymes, intercellular fluid and a cellular membrane. They are also electric. They are energetic in nature. Both in how the communicate with other cells in your body, and in how well they may function based on their energy. The energies in CSE optimize the energetic functioning of your normal cells. And more importantly when you have cancer, they disrupt the functioning of cancerous cells to such an extent that they can cause cancer cells to die. It is this action that is most valuable for improving the ability of ESME and BLA to fight cancer.

On its own, CSE tests at **8600** for fighting cancer. Use 3 bottles a month for early stage cancers and 4 bottles a month for advanced cancers. Use 5 bottles a month for very advanced cancers when you need to be more vigorous.

Like OCMP below, CSE is one of the most important supplements to use or to continue using once your cancer is gone. By adjusting the cellular environment to one that does not lead to the creation of cancer, it is a powerful cancer prevention agent.

## **OCMP - Optimize Cell Membrane Potential To Prevent Cancer**

Boosting the Cell Membrane Potential (helping the walls of the cells work better) optimizes cellular chemistry and increases cell efficiency. This improves:

Cellular protection and fortification by preventing toxins and pathogens from entering cells.

Cell repair and recovery by increasing nutrient flow and access into cells.

Cell hygiene and detoxification by speeding waste transfer and elimination of toxins from cells.

The key factors influencing the ability of cell walls to uptake oxygen and other nutrients, and to eliminate toxins, are positive and negative ion concentrations inside and outside the cell walls. These ions work together creating “electrical gradients” within our tissues. These gradients are what keep cell membranes strong and determine how well our cells and nerves function.

The key elements or ions involved are sodium ( $\text{Na}^+$ ), potassium ( $\text{K}^+$ ), chloride ( $\text{Cl}^-$ ), and calcium ( $\text{Ca}^{2+}$ ). These four elements are found in abundance in almost every diet but are often severely imbalanced at a cellular level. Increasing their intake does not automatically improve Cell Membrane Potential. Indeed in many cases, CMP may actually decrease with mineral supplementation.

The proprietary OCMP formulation is doctor designed to provide therapeutic levels of what we call the ionic gatekeeper nutrients. Among these; high levels of bio-available magnesium is key. Zinc, chromium, manganese, lithium and germanium also contribute. These elements help spark the production and release of calcium and chloride ions, processes essential to continued robust health because they insure that toxins will be better eliminated from your cells, and that nutrients including oxygen will be better absorbed.

This process is fundamental to the prevention of cancer, in addition to being vital for overall health. As far as pH and cancer go, what makes OCMP such a powerful cancer fighter is that it is able to literally alkalize cancer cells, killing them much more effectively than even alkalizers like Cesium Chloride can do because it is able to drive more minerals into the cancer cells. Thus its healing power of **1300** in our energetic testing. Better still, when compared to Cesium, it contributes to the health and well being of every cell in your body.

However, like Cesium and other alkalizers, it would interfere with the action of BLA. And as BLA has a much stronger action against cancer, use BLA rather than OCMP. OCMP can be used to adjust the cellular environment once your cancer is gone -- along with CSE. To keep it from coming back.

Further, OCMP enhances the cells methylation capacity and nutritionally supports mood elevation. Daily use will positively contribute to the detoxification process and help protect the cells and brain from mercury and other neuro toxins. It augments the body's natural pain-relief and stress recovery processes. OCMP is also a premium anti-aging

nutraceutical which, through the individual and synergistic action of its ingredients, may strongly assist in the recovery of youthful function in organs, joints and skin.

Do not take is using BLA as it will interfere with the action of BLA.

Includes therapeutic levels of: Magnesium (chelated, ionic and soluble), TriMethylGlycine (cellular repair and protection), N-Acetyl Glucosamine (intestinal, joint and skin repair and protection), Germanium 132 (cellular oxygen utilization), with supporting levels of organic lithium, selenium, zinc, iodide, vitamins and a full range of trace minerals and absorption assisting cofactors.

### **Custom Elixir pH -- Vibrational Frequencies That Improve pH Levels**

This powerful but unique pH and cancer energetic elixir uses a different approach to helping the body adjust pH levels. It contains vibrational frequencies that have been captured by the water in it, and stabilized to remain in the water. These energetic frequencies fundamentally communicate instructions to the cells in your body when you take it. In the case of Custom Elixir pH, the message communicated gives instructions that optimize the kidneys' ability to eliminate acidic waste. Even more significant in helping to adjust the pH levels in the body, the kidneys are also instructed to neutralize excess acidity by adjusting the balance of salts inside and outside cells. Salts neutralize acids, and by adjusting these salts, more acids can be neutralized, and pH increased.  
**820.**

### **pH Balancer 8.0 - A Blend Of Herbs, Minerals And Amino Acids To Alkalize pH In Cancer Cells**

As mentioned above for pH and cancer, this is the next best body alkalizer we have found coming in at **499** in the energetic testing. The proprietary formulation of herbs, minerals and amino acids in pH Balancer 8.0 include: L-Taurine, Hawthorne Berry, Safflower, Wasabi Japonica, Wild Cherry, Allium Cepa, Barberry, Bilberry, Cinnamon, L-Carnitine, L-Arginine, Turmeric, Cayenne, Wood Betony, Dioscorea, Pleurisy, Potassium, Fritillaria, and Magnesium. There is no one particular ingredient that is the key to its effectiveness. It is the particular combination in the right quantities that makes it work so well. In addition, as it is often important to reduce inflammation when fighting cancer, you get its ability to do so as an additional benefit.

There are 90 tablets per bottle. As with most supplements you take more for an advanced cancer than for an early stage cancer because you have more cancer to deal with so you need to be more vigorous in your approach to dealing with it.

For an early stage cancer, consider using 3 bottles a month, for advanced cancer get 4 bottles for a month's supply, and if trying to reverse an end stage cancer, go up to 5 bottles for a month's supply. They can be taken with meals or on an empty stomach.

## **How to Reduce or Perhaps Even Stop Ascites and other Fluid Build-up**

Ascites is a buildup of water and fluid in the stomach or lungs caused by cancer. It is one of the tougher issues to deal with if you've got cancer. And there hasn't been a whole lot you can do about it other than getting the fluid drawn when the stomach or lungs get too full. Or of course, knocking out that cancer.

The fundamental reason this accumulation of fluid occurs has to do with acidity. Thus, we discuss it here in the pH section. There is so much lactic acid being produced by the cancer, or by the killing of the cancer cells which produces acidic waste, that the body dilutes this acid buildup with fluid. The build-up is so acidic, it would be harmful if it was not diluted.

So your body produces fluid to dilute the acid in an attempt to protect itself. Sometimes it is a poorly functioning liver that is the reason the body can't get rid of the acids -- which can include chemo toxins. Sometimes a poorly functioning kidney. Sometimes there is just too much acid for a poorly functioning detox system to handle.
